PROJECT ABSTRACT

LAZEROX is an e commerce website which deals mainly with photocopy of required documents. E Commerce is process of doing business through computer networks. A person sitting on his chair in front of a computer can access all the facilities of the Internet to buy or sell the products. Unlike traditional commerce that is carried out physically with effort of a person to go & get products, ecommerce has made it easier for human to reduce physical work and to save time.

This project demonstrates how an e commerce website works using a local Xerox shop as an example. Our project connects xerox or photocopy shops nearby the client, through the portal the client can send the documents from his place and will receive a notification when the work is completed and document is ready to be collected. It's an efficient way of recieving required documents in order to save time or waiting for hours to get a piece of paper printed. The portal also shows the address and working hours of the shops for convenience of the user. This project mainly targets audience with busy schedule or lazy people like us

We are building the project using PHP(Hypertext Preprocessor), SQL(Structured Query Language), HTML(Hypertext Markup Language) and CSS(Cascading Style Sheets) languages.
